$ whoami
Name: Brayden Houston
Job: Cybersecurity Engineer
Interests: homelab, automation, devops, running
Shameless Plugs: DC608, Wisconsin CRT
Extra Notes: Thoughts are my own not my employeers
$
```

Quick Reminder From Safety Dwight

What is Kali Nethunter?

Its Kali but on your phone

Why Nethunter?

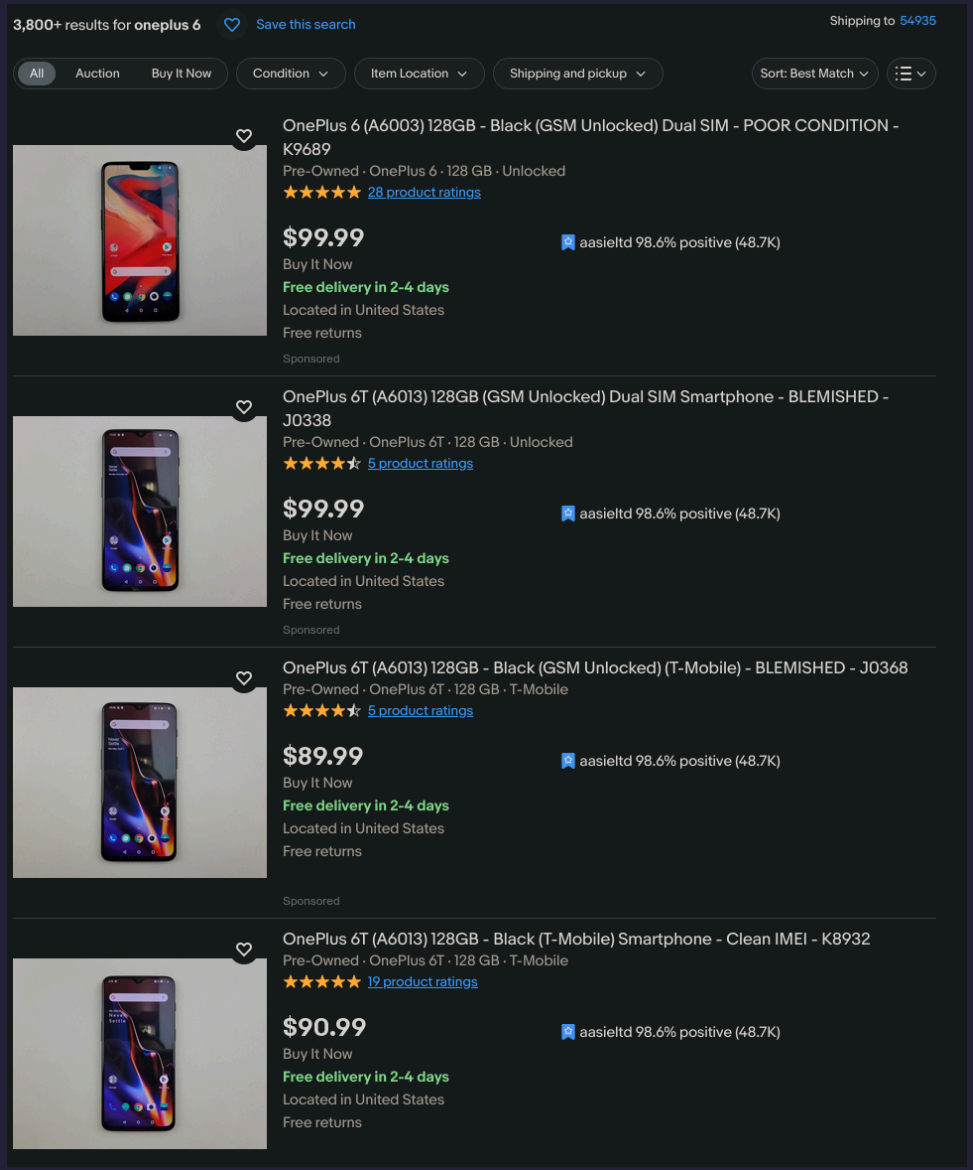
- Turn you phone into a sick cyberdeck(phone?)
- Plug in usb devices for more options
- Phones are everywhere and who would expect a phone to be a security risk-it looks nothing like a Raspberry Pi or Flipper Zero 🐬

What do we need to get started?

- One or more supported tablet, phone, or watch (Sorry iOS 🥲)
- A few minutes or maybe an afternoon
- Decide which edition you want to try

Where could we get a device?

- Ebay
- Facebook Marketplace
- local classifieds
- probably in that desk drawer back at home



What can we do?

- Bad USB
- Wigle/Kismet Wardriving
- BT Attacks
- Wifi Scans, Deauth
- CAN Arsenal - Car Hacking
- Way more

Editions

Edition	Usage
NetHunter Lite	The full NetHunter package for rooted phones without a custom kernel.
NetHunter	The full NetHunter package with custom kernel for supported devices

Feature	NetHunter Lite	NetHunter
App Store	Yes	Yes
Kali cli	Yes	Yes
All Kali packages	Yes	Yes
KeX	Yes	Yes
Metasploit w/o DB	Yes	Yes
Metasploit with DB	Yes	Yes
NetHunter App	Yes	Yes
Requires TWRP	Yes	Yes
Requires Root	Yes	Yes

Couple Differences

Feature	NetHunter Lite	NetHunter
WiFi Injection	No	Yes
HID attacks	No	Yes
BT Arsenal	No	Yes
CAN Arsenal	No	Yes

Full and Lite versions probably aren't daily driver phone material

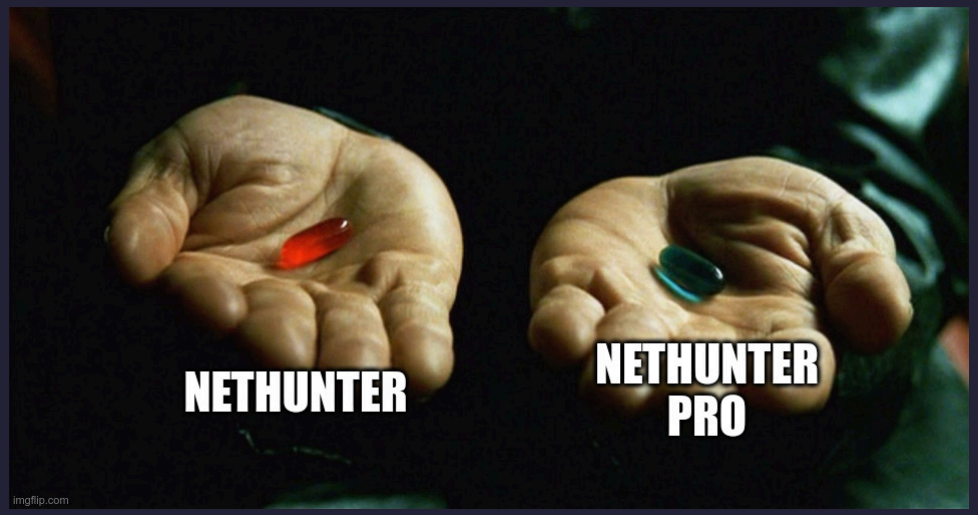
Install Nethunter

https://www.kali.org/get-kali/#kali-mobile

Phone Options

Nethunter "Pro"
- Pinephone and PinePhonePro
- Some Android Phones

Nethunter
- Most Android Phones



I tried them both

Placeholder slide

side by side app screen cap demo will go here

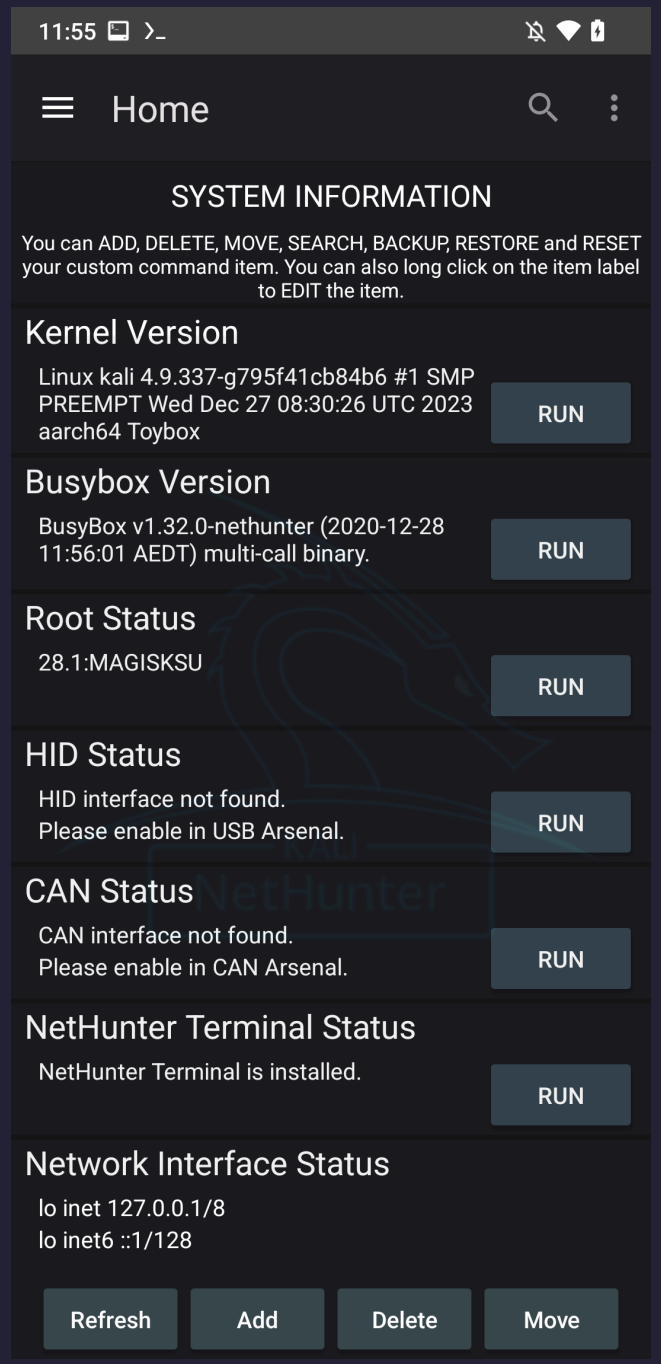
Android Impressions

Still rocking a OnePlus6 as my Nethunter device

One of the Nethunter "Pro" compatible devices

Root access lets us do fun things like re-purposing phone hardware (ex. alert slider)

Still use Android apps. Sideload Gapps if you need them



PinePhone Impressions

Kinda like having a Raspberry Pi in your pocket-for better or worse.

The functionality is all there but the Posh Mobile interface isn't my favorite

The beta/developer hardware probably isn't doing the vision for the experience justice

Shout outs to the Pine64 IRC/Discord!

Pine64 has said they are discontinuing the Pinephone Pro - "standard" is still being sold

Is Rootless An Option?

Yes

NetHunter Rootless	The core of NetHunter for unrooted, unmodified devices

Feature	NetHunter Rootless
App Store	Yes
Kali cli	Yes
All Kali packages	Yes
KeX	Yes
Metasploit w/o DB	Yes

Placeholder slide

HID injection demo clip will go here

Placeholder slide

WIFI Pumpkin demo clip will go here

One more thing

New Android Terminal

- Select Pixel or Samsung Android 16 devices - more soon?
- A full Debian VM
- Still some (Android) system and hardware restrictions
- ~~Currently a 16gb max file system~~ - Fix in Android 16
- Yes it runs Doom
- Can't run in the background - Android

TODO Add app screenshot

Wishlist

- Mobile drop phone node
- "Off grid" file share or webserver
- Bluetooth Payloads
- CANBUS - This is pretty new to Nethunter
- Upcycle some phones and have some fun

Q & A

Slides

Reach out and show me what you do with Nethunter!
